LDEQ Geographic Information Systems (GIS) Make-A-Map

UST Layers

Make-A-Map Version 2

(Alpha)

What is Make-A-Map?

- Is a interactive mapping tool designed to provide the user with information based on their inputs
- It allows you to add several types of data layers including satellite imagery and aerial photography
- It contains several map layers pertinent to UST's

Why use Make A Map?

- A tool used in remediation in planning
 Corrective Action at contaminated sites
- A tool used for compilation of RECAP Input Parameter Forms, such as GW Classes and FOC data
- A tool used in locating other UST sites with similar characteristics within proximity of your site of interest

Using Make-A-Map

- This presentation will demonstrate how to:
 - Access the program
 - User functions
 - Data layers available for UST's
